Eylo-Reddit-v2

AI-Powered, Team-Synced Reddit Outreach Automation

Supabase Database

Team-Synced Data & Logs

OpenAI API

AI Content Generation & Analysis

NotebookLM

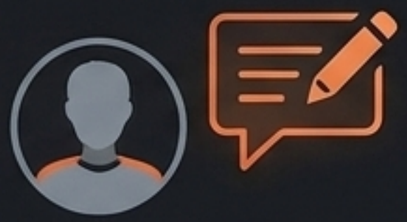

Real-World Benefits of Automated Outreach

Targeted Hackathon Promotion

Efficiently promote events in niche, relevant subreddits to the right audience.

Personalized Custom Messaging

Send tailored messages to users based on their post history and context, increasing engagement.

Effective App Promotion

Directly drive app downloads and user acquisition through scalable, contextual outreach.

Eylo-Reddit-v2 unlocks the 'goldmine' of Reddit for research and lead gen, executing outreach at scale with context and team sync to build brand reputation.

NotebookLM

Intelligent Automation for Teams

NotebookLM

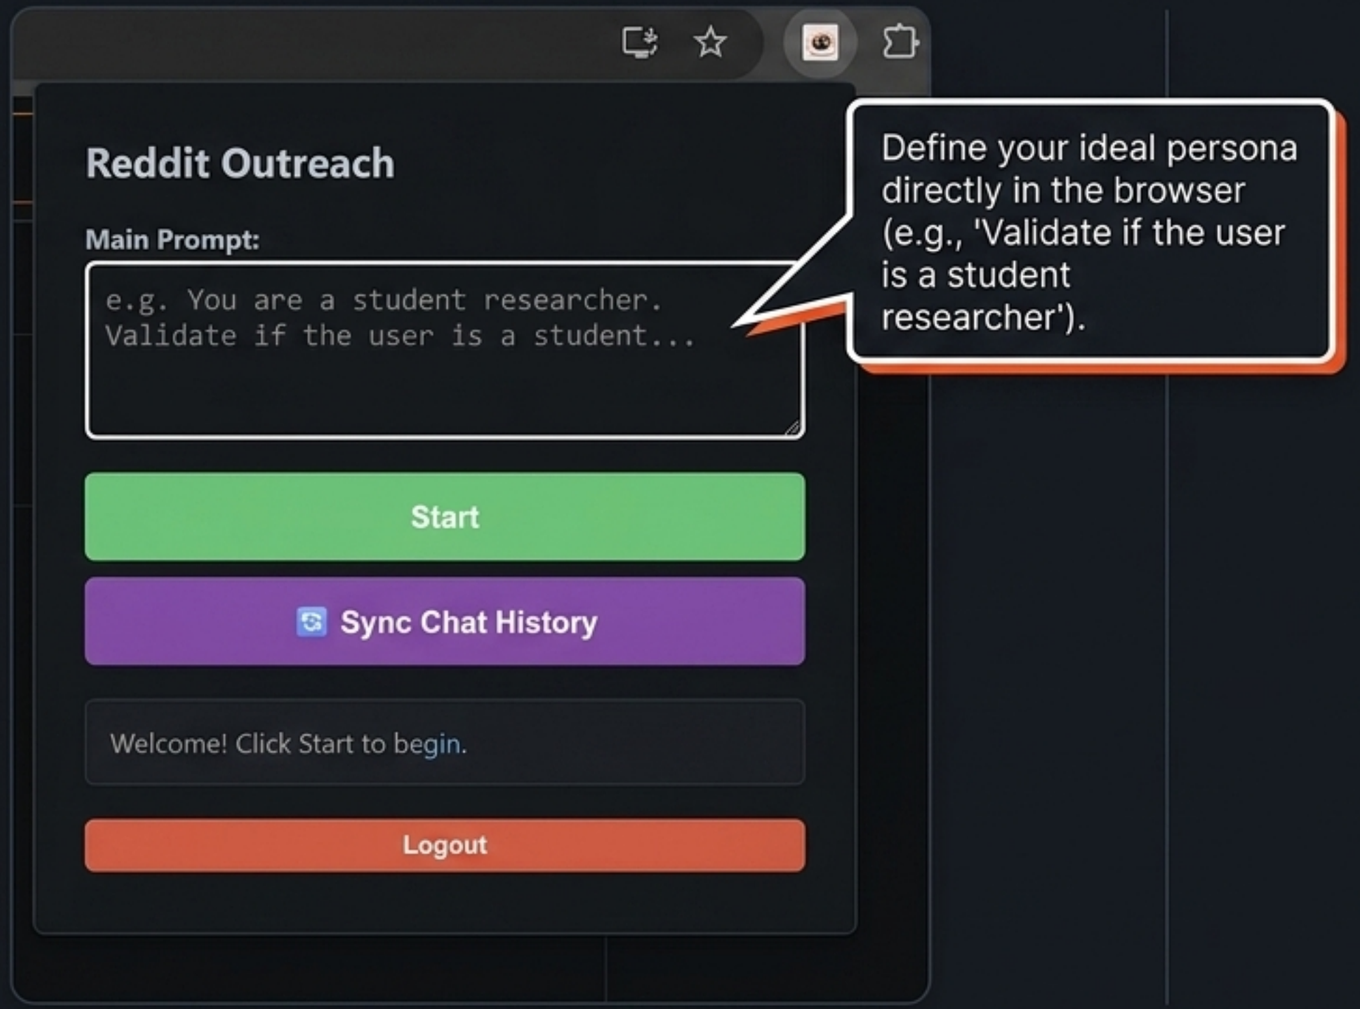

The Outreach Evolution

	Manual	Standard Bots	Eylo-Reddit-v2
Filtering Engine	Human Guesswork	Basic Keyword Matching	GPT-4 Persona Analysis
Collision Control	None (No team visibility)	Local Only (Single-machine history)	Global Supabase Sync
Execution Method	1-by-1 Tab Switching	High-Risk API Abuse	Manifest V3 Native DOM

NotebookLM

Precision Targeting with AI

Eylo doesn't just scrape; it reads. It ensures you only engage highly qualified prospects.

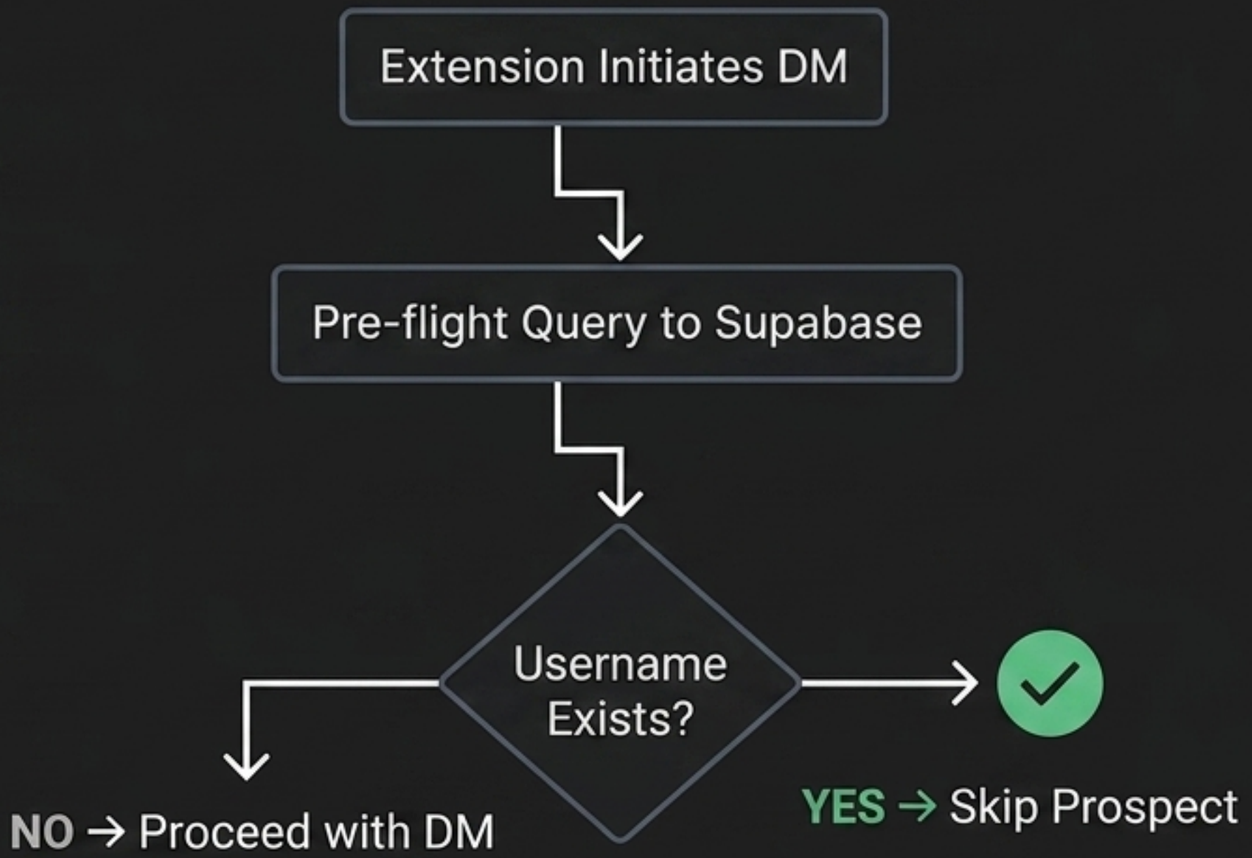

NotebookLM

Zero Collisions via Supabase

Table: outreach_logs

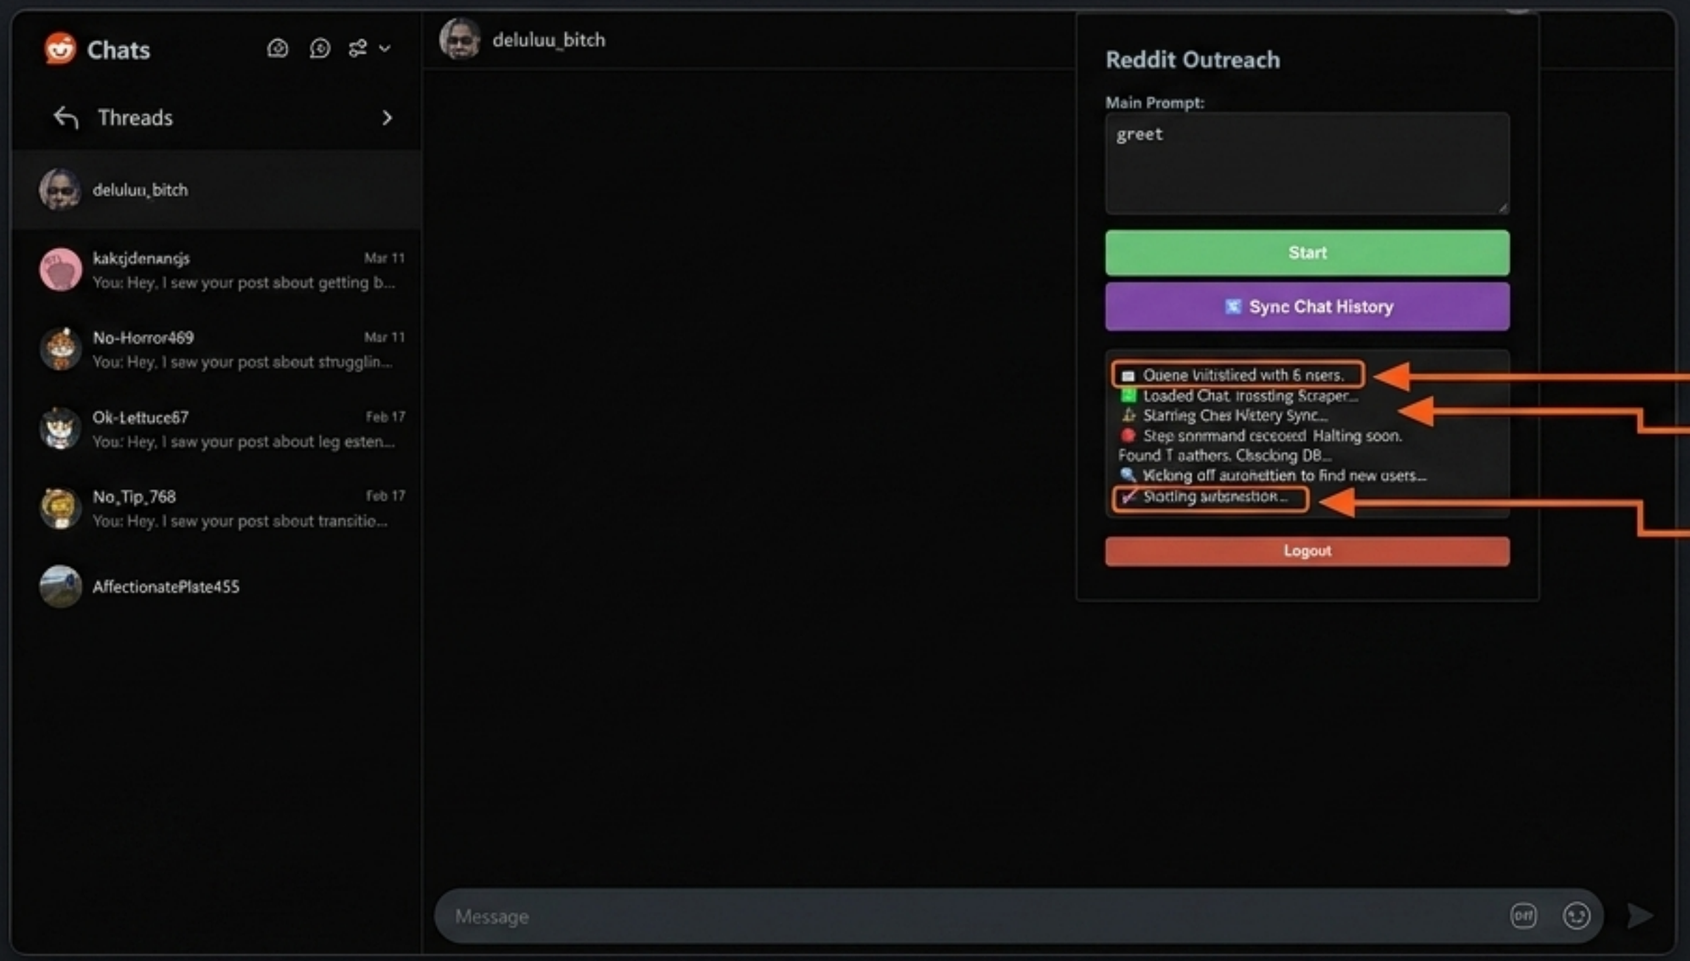

```
id: UUID (Primary key)
user_id: UUID (Team member)
reddit_username: TEXT (Target prospect)
```

NotebookLM

Hands-Free DOM Navigation

Built on robust `Manifest V3` standards. Content scripts take over the heavy lifting natively within the DOM.

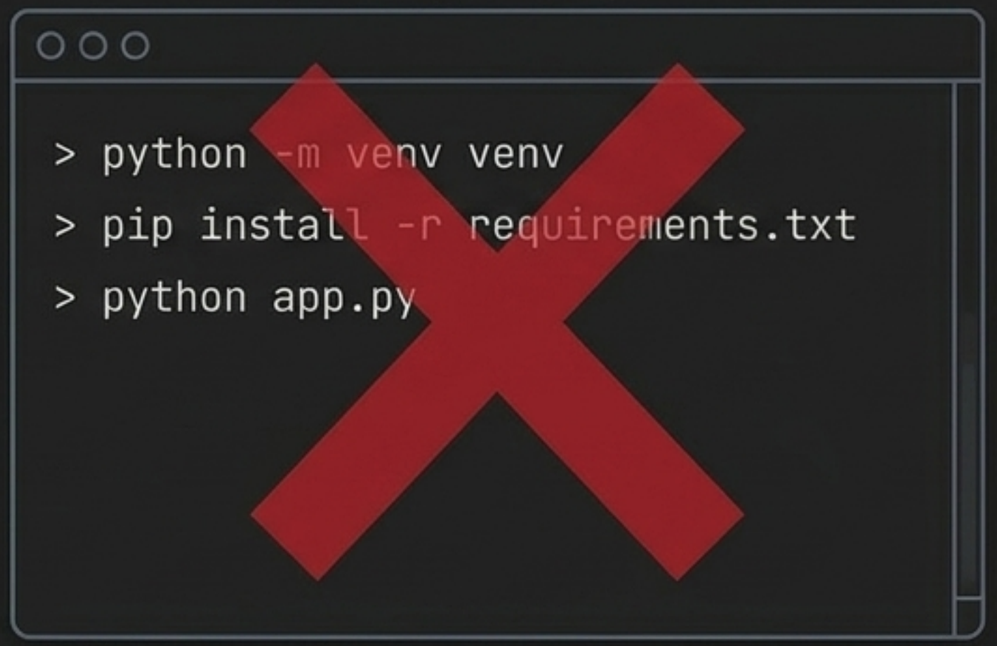

Queue initialized with 6 users.
Loaded Chat. Injecting Scraper...

NotebookLM

Live System: Ready for Evaluation

The Flask backend and Supabase instance are deployed and active on a public URL. Bypass all local backend setup. No Python required. No .env files required.

Bypassed Path

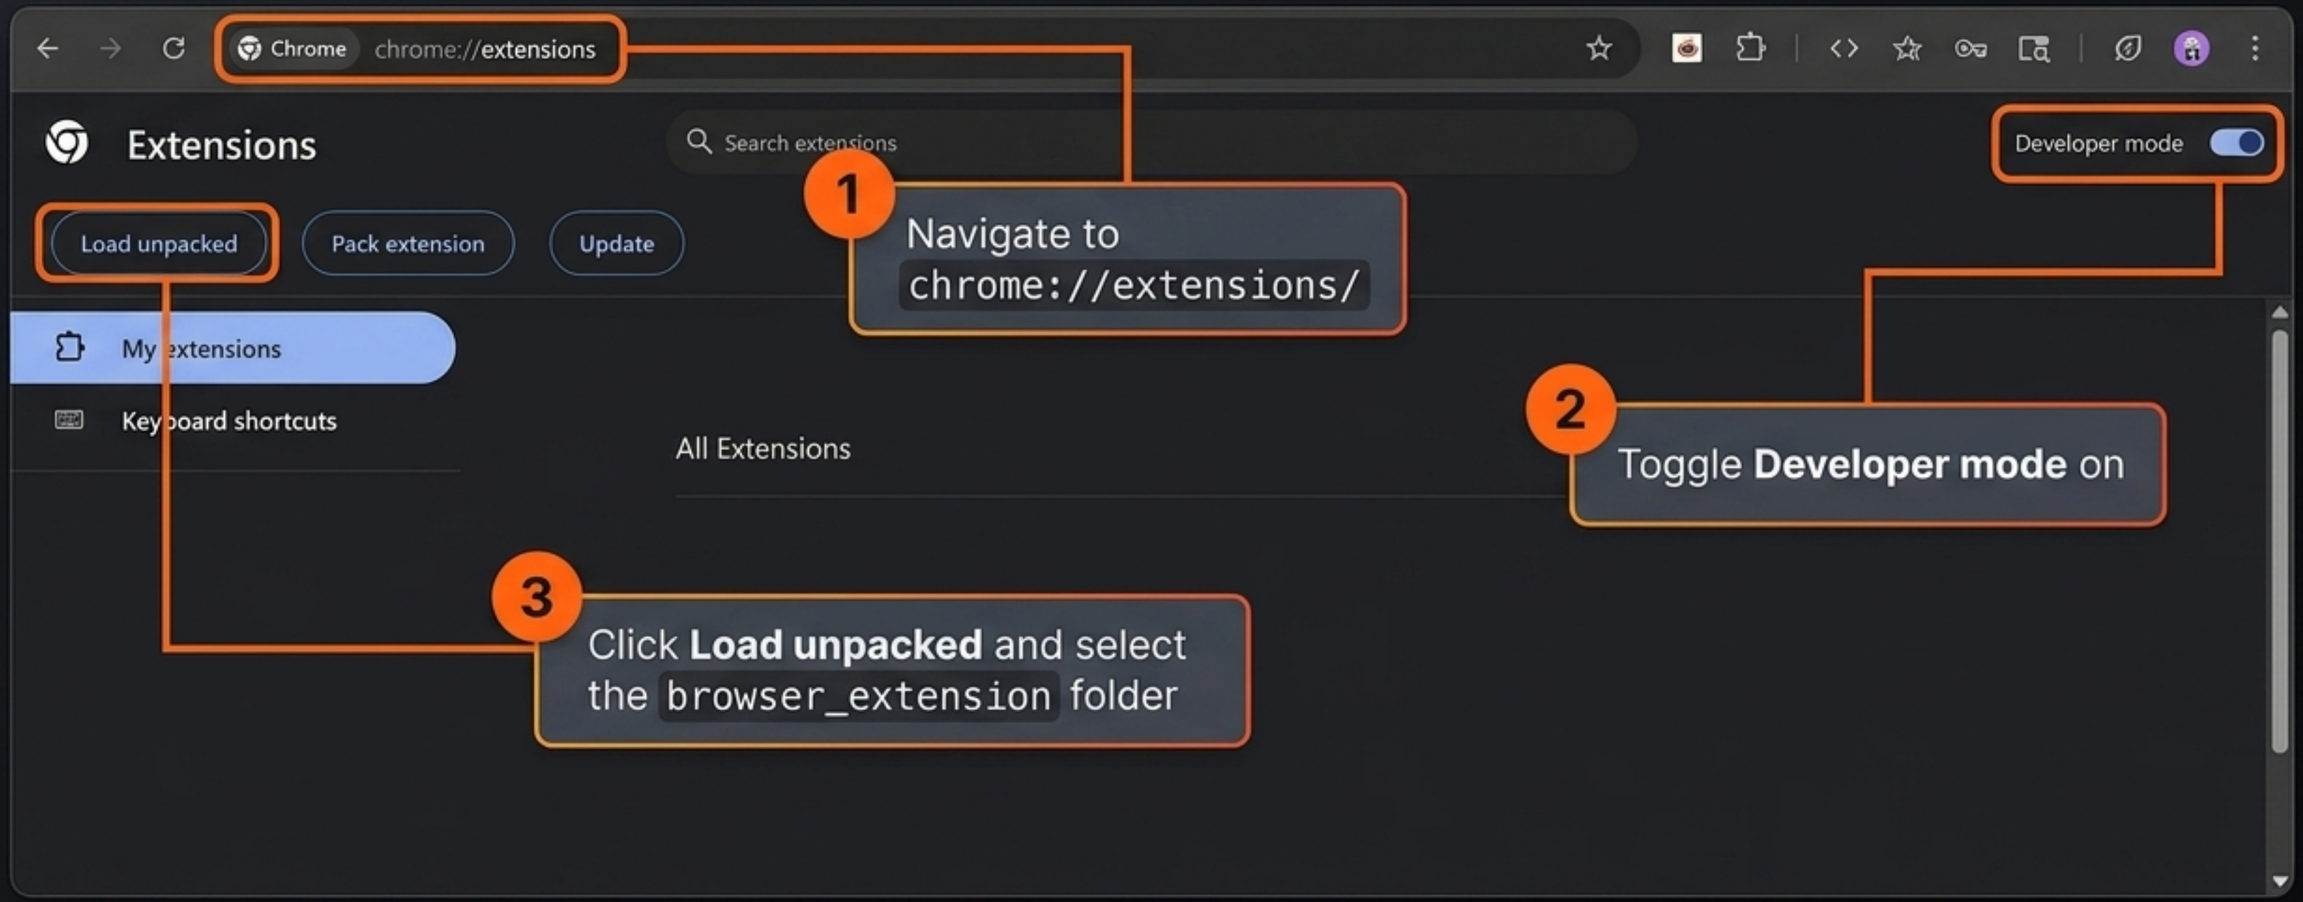

Success Path

Cloud Server
Deployed Backend

NotebookLM

1. Install via Developer Mode

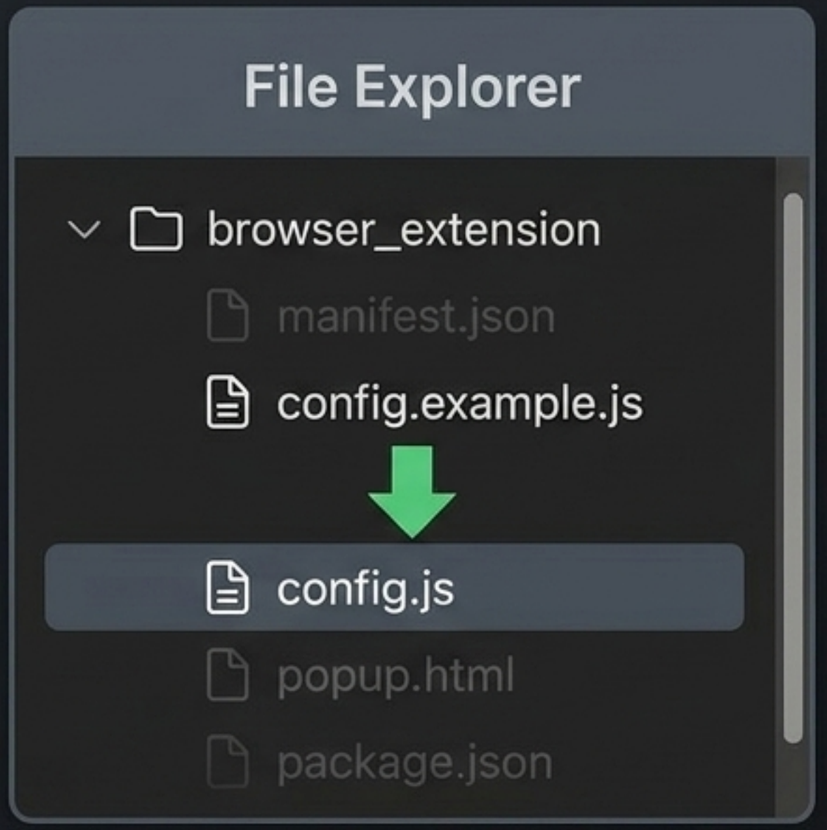

NotebookLM

2. Verify Live Configuration

The extension is pre-wired. If config.js is missing, simply duplicate config.example.js. It instantly points the extension to the live Python server and Supabase memory bank.

File Explorer

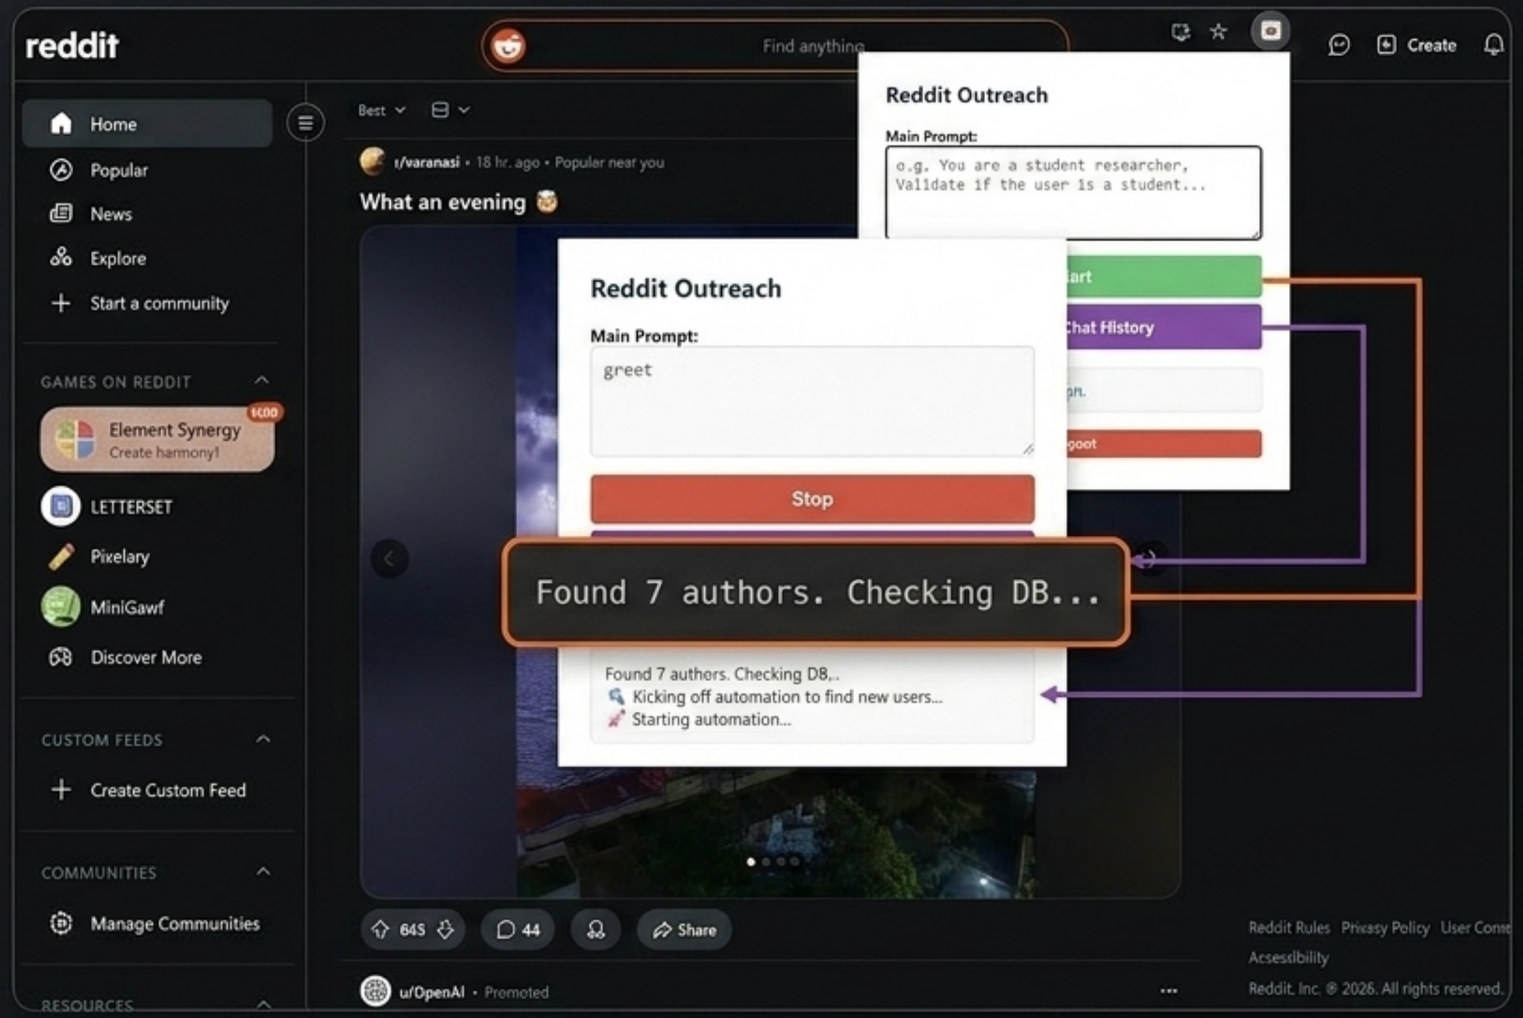

Code Editor - config.js

```
1  const SUPABASE_URL = 'https://[live-project].supabase.co'
2  const SUPABASE_ANON_KEY = 'eyJhbGciOiJIUzI1NiIn...'
3  const BACKEND_URL = 'https://[live-backend-url].render.com'
4
```

NotebookLM

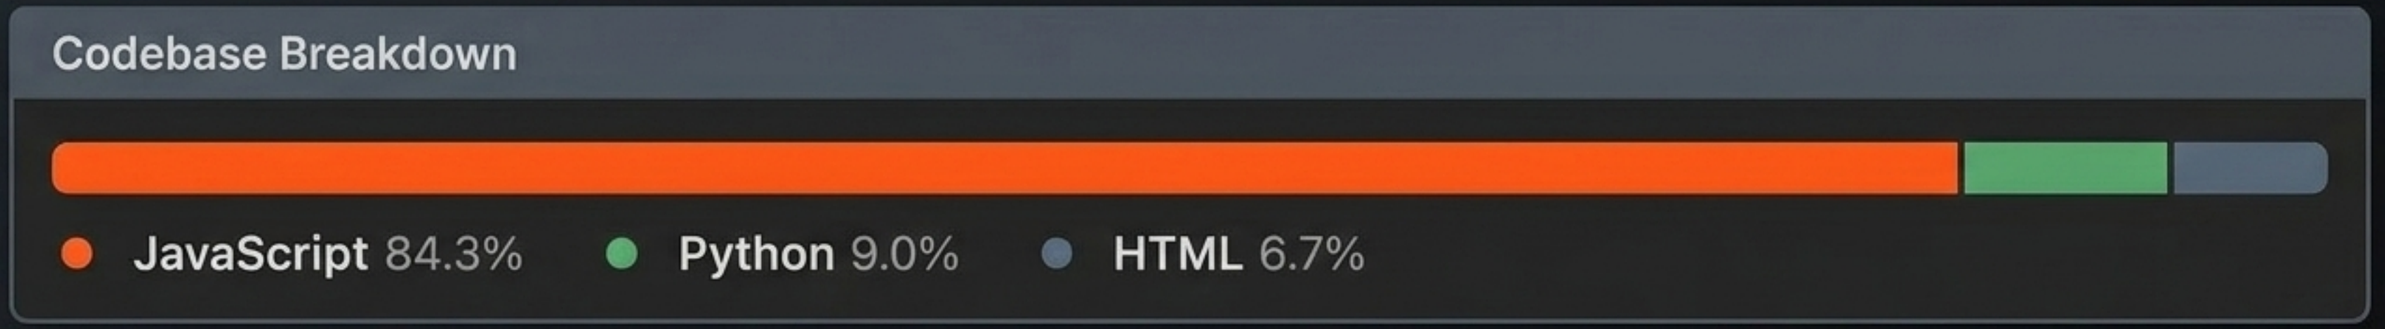

3. Trigger the Automation

1. Open a relevant subreddit.
2. Click the Eylo extension icon.
3. Enter your target persona prompt.
4. Click **Start** and let Manifest V3 and GPT-4 take over.

NotebookLM

Open Source. AI-Driven. Team Ready.
